Senior Software Engineer on Wells Fargo's fixed-income trading desk, building applied-AI systems and distributed backends. Top Achievers Award recipient (top 1% of employees firm-wide) for ML, GenAI, and P&L platform delivery.

EXPERIENCE

Wells Fargo | Bengaluru, India

Senior Software Engineer

Jan 2026 – Present

- Built a bond recommendation engine from the ground up, scoring about **4 million client-offering pairs daily** with XGBoost learning-to-rank. Piloting with the desk, projected to save millions in sales commissions.
- Engineered the engine's leak-safe feature pipeline and in-house MLOps stack, unlocking a **3.7M-row** external holdings dataset through entity resolution across identifier systems.
- Automated Spring Boot integration test authoring across **80+ microservices** with a multi-agent AI framework on GitHub Copilot, with orchestrated agents for repo scanning, coverage planning, critique, and test generation.
- Cut end-to-end **p95 latency 66%** on slow P&L calculations by benchmarking each Spring Boot and Camel service route to isolate the bottleneck, then reworking request throttling and load distribution.
- Shipped a replay-safe historical rerun REST API for the P&L services on async Spring Boot and Camel routes, so corrected past positions persist to MongoDB without republishing into the live Kafka stream.

Software Engineer

Sep 2023 – Dec 2025

- Built orchestrator and validator LLM agents on LangGraph and MCP running hybrid BM25-plus-vector RAG over schema stores behind injection guards, PII masking, and audit logging for a natural-language MongoDB interface.
- Cut P95 read latency from around **710ms to 230ms** with no loss of accuracy by rebuilding the Spring Boot P&L services' real-time read path on MongoDB with aggregation pipelines and compound indexes.
- Cut multi-million-dollar reporting-penalty exposure with a clean P&L activity-tracking layer, working cross-functionally with 2 trading-desk teams to roll out correlation-ID audit tracking across 6 service flows and 8 repositories.
- Led the end-to-end migration of 10+ services to Red Hat OpenShift, developing Helm charts and GitHub Actions CI/CD workflows to standardize and automate Kubernetes deployments.
- Championed AI-assisted development, presenting agentic workflows to **200+ engineers**, authoring P&L architecture documentation, running knowledge-transfer sessions, and mentoring peers on workflows they use daily.

Program Associate

Jul 2022 – Aug 2023

- Saved **2–3 person-hours daily** by owning an asset-backed-finance reporting workflow end to end with traders, building an Excel ingestion engine with schema migrations and reference-data reconciliation.

EDUCATION

National Institute of Technology, Calicut (NIT Calicut)

Kozhikode, India

B.Tech in Computer Science and Engineering, CGPA 8.55/10

2018 – 2022

SKILLS

Languages: Python, Java, C++, C

AI/ML: LLMs, AI agents, Agentic RAG, LangGraph, MCP, Claude Code, Vector databases, MLOps, LLM evals, XGBoost, Recommender systems, AI guardrails

Backend: Distributed systems, Event-driven microservices, Apache Kafka, Spring Boot, MongoDB, SQL, Redis, Concurrency and multithreading, Performance engineering, Data engineering

Cloud Infrastructure and CI/CD: OpenShift, Kubernetes, Docker, Helm, GitHub Actions, Azure

PUBLICATIONS & AWARDS

Publication: SaBMOGWO-S, a feature-selection algorithm. *The Journal of Supercomputing* (Springer), 2023 (co-author).

[DOI: 10.1007/s11227-023-05145-y](https://doi.org/10.1007/s11227-023-05145-y).

- **Top Achievers Award, 2025:** Wells Fargo's highest individual recognition, for high-impact P&L and GenAI delivery.
- **Top Innovator, Innovation Pitch Day 2024:** top 4 of 600+ firm-wide entries, for a natural-language database assistant.
- **Manager Spotlight Awards (x2):** awarded for consistent ownership and delivery.
