EDUCATION

National Institute of Technology Calicut

Bachelor of Technology in Computer Science and Engineering

2018 – 2022

CGPA 8.55/10

EXPERIENCE

Senior Software Engineer | Wells Fargo, Bengaluru, India

Jan 2026 – Present

- Built a Python bond recommendation engine from scratch for Fixed Income trading that scores **4M client-offering pairs** daily with XGBoost learning-to-rank models
- Developed its MLOps stack and the feature pipeline that matches 3.7M-row external holdings to counterparty IDs
- Cut end-to-end **p95 latency 66%** on Profit and Loss calculations by benchmarking each Java service route to isolate the bottleneck, then reworking throttling and load distribution
- Architected a multi-agent framework that writes Spring Boot integration tests across **80+ microservices**
- Designed its orchestrator and agents for repo scanning, coverage planning, critique, and Copilot test generation
- Shipped a REST API to rerun historical Profit and Loss on Camel routes, without republishing into the live Kafka stream

Software Engineer | Wells Fargo, Bengaluru, India

Sept 2023 – Dec 2025

- Rebuilt Profit and Loss read paths on MongoDB aggregation pipelines and cut p95 latency from **710ms to 230ms**
- Built LLM agents on LangGraph and Model Context Protocol (MCP) for natural-language querying of MongoDB
- Implemented hybrid keyword-plus-vector retrieval-augmented generation (RAG) over database schemas
- Hardened the agents with injection guards and PII masking, and added audit logging
- Led the migration of 10+ Java services to Red Hat OpenShift and cut each release from **4-5 to 2 engineer-hours**
- Automated the Kubernetes deployments with Helm charts and GitHub Actions CI/CD workflows
- Created a reusable pattern for SLA activity tracking, adopted by 2 trading-desk teams across 8 repositories
- Presented agentic AI workflows to **200+ engineers** and authored the Profit and Loss architecture documentation

Program Associate | Wells Fargo, Bengaluru, India

July 2022 – Aug 2023

- Modeled complex asset-backed bond deals in Java and built the pipeline that loads them from source files into SQL
- Saved 2-3 person-hours daily by owning an asset-backed-finance reporting workflow end to end with traders

PROJECTS

Payments Ledger | Java, Spring Boot, PostgreSQL

github.com/Arjun-B-J/payments-ledger

- Developed a double-entry payments ledger with idempotent, two-phase transfers and an append-only journal
- Implemented a transactional outbox, deadlock-free lock ordering, and a reconciler that found zero drift in 18 runs
- Raised **hot-account throughput 2.7x** to 10.9k durable transfers per second by sharding its balance over 16 rows

Where Is My Money Going | Python, FastAPI, LangGraph, Ollama

github.com/Arjun-B-J/where-is-my-money-going

- Built an expense analyzer that parses Indian bank statements and categorizes spending with a local LLM
- Designed a LangGraph pipeline with a validator agent and an embedding memory that reuses past user corrections
- Added evals that measured **91% accuracy** against 52% for regex rules, plus a tool-calling agent and an MCP server

SKILLS

Languages: Python, Java, SQL

AI and Machine Learning: LLM agents, LangGraph, MCP, RAG, LLM evaluation, Vector databases, AI guardrails

Backend and Cloud: Spring Boot, Apache Kafka, PostgreSQL, MongoDB, Distributed systems, Microservices, Kubernetes

ACHIEVEMENTS

- Top Achievers Award, 2025: highest individual recognition at Wells Fargo, for Profit and Loss and generative AI delivery
- Top Innovator, Innovation Pitch Day 2024: top 4 of 600+ firm-wide entries, for a natural-language database assistant
- Publication (co-author): SaBMOGWO-S, a feature-selection algorithm. The Journal of Supercomputing (Springer), 2023.
