Senior Software Engineer with 4+ years of experience building applied-AI and distributed backend systems for Wells Fargo's fixed-income trading desk. Recent work spans an ML bond recommendation engine with an LLM assistant and a real-time PnL rebuild that cut latency by two-thirds. Top Achievers Award recipient (top 1% of employees firm-wide).

EXPERIENCE

Senior Software Engineer | Wells Fargo, Bengaluru

Jan 2026 – Present

- Building an ML bond recommendation engine that ranks 500–800 daily offerings per client, plus a traders' LLM assistant; beat the single-model baseline by 58% on Recall@3 in offline evaluation. Now piloting with the desk; projected to save millions in sales commissions; own the XGBoost learning-to-rank models and feature pipeline.
- Shipped historical rerun support for the PnL service using async Camel routes over MongoDB and Kafka. Corrections to past positions now recompute and persist under the correct historical date without republishing into the live trade stream.
- Led a performance investigation into slow PnL calculations, benchmarking each service route to isolate the bottleneck. Reworked request throttling and load distribution, cutting end-to-end p95 latency by 66%.
- Created a reusable activity-tracking layer, part of a clean-PnL regulatory-reporting drive, adopted by two trading-desk teams across six service flows and eight repositories. Auditable run status with correlation IDs cuts exposure to multi-million-dollar reporting penalties.
- Championed GitHub Copilot adoption across the line of business, presenting agentic workflows to 200+ engineers.

Software Engineer | Wells Fargo, Bengaluru

Jul 2022 – Dec 2025

- Designed and prototyped a natural-language interface to MongoDB: orchestrator and validator LLM agents (LangGraph, MCP) run RAG over schema vector stores with PII-masking guardrails. Won the firm-wide Top Innovator award; picked up by multiple teams and now the basis of a live internal query assistant.
- Extended the Java Spring Boot PnL microservices to a new asset class: expected cash-flow models, EUR FX conversion, swap-position roll-ups, and risk-factor attribution. Released with production Kafka topics and regression sign-off.
- Rebuilt the real-time PnL read path on MongoDB, replacing view-based reads with aggregation pipelines and compound indexes. P95 read latency dropped from around 710ms to 230ms with no loss of accuracy.
- Automated regression tests for 150+ financial scenarios with parallel runs and Splunk telemetry, cutting run time by 60%.
- Drove the migration of 10+ services onto OpenShift with rebuilt CI/CD pipelines.
- Delivered an asset-backed-finance reporting feature end to end on an investment-banking platform, working directly with traders: an Excel deal- and pricing-sheet ingestion engine plus schema migrations and reference-data reconciliation, replacing a manual workflow and saving 2–3 person-hours daily.

Technology Intern | Wells Fargo, Bengaluru

May 2021 – Jul 2021

- Prototyped a time-series forecasting engine for ATM cash optimization, benchmarking SARIMA, LSTM, and Prophet across 111 ATMs with holiday and weather signals, reaching about 91% accuracy on weekly forecasts.

EDUCATION

B.Tech, Computer Science and Engineering | NIT Calicut, CGPA 8.55

2018 – 2022

TECHNICAL SKILLS

Languages: Python, Java, C++, C

AI/ML: AI agents, Agentic RAG, LangGraph, LangChain, MCP, GitHub Copilot, Recommender systems, Learning-to-rank, XGBoost, PyTorch, Prompt engineering, AI guardrails, PII masking

Backend: Distributed systems, System design, Microservices and event-driven architecture, Apache Kafka, Spring Boot, MongoDB, SQL, Redis, REST APIs, Concurrency and multithreading, Performance engineering

Cloud Infrastructure and CI/CD: OpenShift, Kubernetes, Docker, GitHub Actions, Splunk, Observability

PUBLICATIONS & AWARDS

Publication: SaBMOGWO-S, a feature-selection algorithm evaluated on 21 benchmark datasets. *The Journal of Supercomputing* (Springer), 2023, Vol. 79 (co-author). DOI: [10.1007/s11227-023-05145-y](https://doi.org/10.1007/s11227-023-05145-y).

- Top Achievers Award, 2025:** Wells Fargo's highest individual recognition, for high-impact PnL and GenAI delivery.
- Top Innovator, Innovation Pitch Day 2024:** top 4 of 600+ firm-wide entries, for a natural-language database assistant.
- Manager Spotlight Awards (×3):** awarded in three consecutive years for consistent ownership and delivery.
