Experience

Senior Software Engineer | Wells Fargo, Bengaluru, India Jan 2026 – Present

- Built a bond recommendation engine from scratch in Python for Fixed Income trading, scoring 4M client-offering pairs daily with XGBoost learning-to-rank models
- Developed its feature pipeline and MLOps stack, matching 3.7M-row external holdings to counterparty IDs
- Cut end-to-end p95 latency 66% on Profit and Loss calculations by benchmarking each Java service route to isolate the bottleneck, then reworking throttling and load distribution
- Automated Spring Boot integration test authoring across 80+ microservices by architecting a multi-agent framework
- Designed its orchestrator and agents for repo scanning, coverage planning, critique, and Copilot test generation
- Shipped a historical rerun REST API for Profit and Loss on Camel routes, without republishing into the live Kafka stream

Software Engineer | Wells Fargo, Bengaluru, India Sept 2023 – Dec 2025

- Built LLM agents on LangGraph and Model Context Protocol (MCP) for natural-language querying of MongoDB
- Implemented hybrid keyword-plus-vector retrieval-augmented generation (RAG) over the database schema stores
- Secured the agents behind injection guards, PII masking, and audit logging
- Cut p95 read latency from 710ms to 230ms by rebuilding Profit and Loss read paths on MongoDB aggregation pipelines
- Designed a reusable SLA activity-tracking pattern adopted by 2 trading-desk teams across 8 repositories
- Cut each release from 4-5 to 2 engineer-hours by leading the migration of 10+ Java services to Red Hat OpenShift
- Automated the Kubernetes deployments with Helm charts and GitHub Actions CI/CD workflows
- Presented agentic AI workflows to 200+ engineers and authored the Profit and Loss architecture documentation

Program Associate | Wells Fargo, Bengaluru, India July 2022 – Aug 2023

- Saved 2-3 person-hours daily by owning an asset-backed-finance reporting workflow end to end with traders
- Developed its Excel ingestion engine with SQL schema migrations and reference-data reconciliation

Technology Intern | Wells Fargo, Remote May 2021 – July 2021

- Created a time-series forecasting engine for ATM cash optimization across 111 ATMs
- Benchmarked SARIMA, LSTM, and Prophet models with holiday and weather factors

Skills

Languages: Python, Java, SQL

AI and ML: LLM agents, LangGraph, MCP, RAG, Vector databases, XGBoost, Recommender systems, MLOps, AI guardrails

Backend and Cloud: Spring Boot, Apache Kafka, MongoDB, Microservices, OpenShift, Kubernetes, Azure, GitHub Actions

Education

National Institute of Technology, Calicut (NIT Calicut) 2022

Bachelor of Technology (B.Tech) in Computer Science and Engineering, CGPA 8.55/10

Achievements

- Top Achievers Award, 2025: highest individual recognition at Wells Fargo, for Profit and Loss and generative AI delivery
- Top Innovator, Innovation Pitch Day 2024: top 4 of 600+ firm-wide entries, for a natural-language database assistant
- Publication (co-author): SaBMOGWO-S, a feature-selection algorithm. The Journal of Supercomputing (Springer), 2023. DOI: 10.1007/s11227-023-05145-y
